

Case

Benefitnet

Insurance Software

Customer name: Teambase

Domain name - <http://benefitnet.com/>

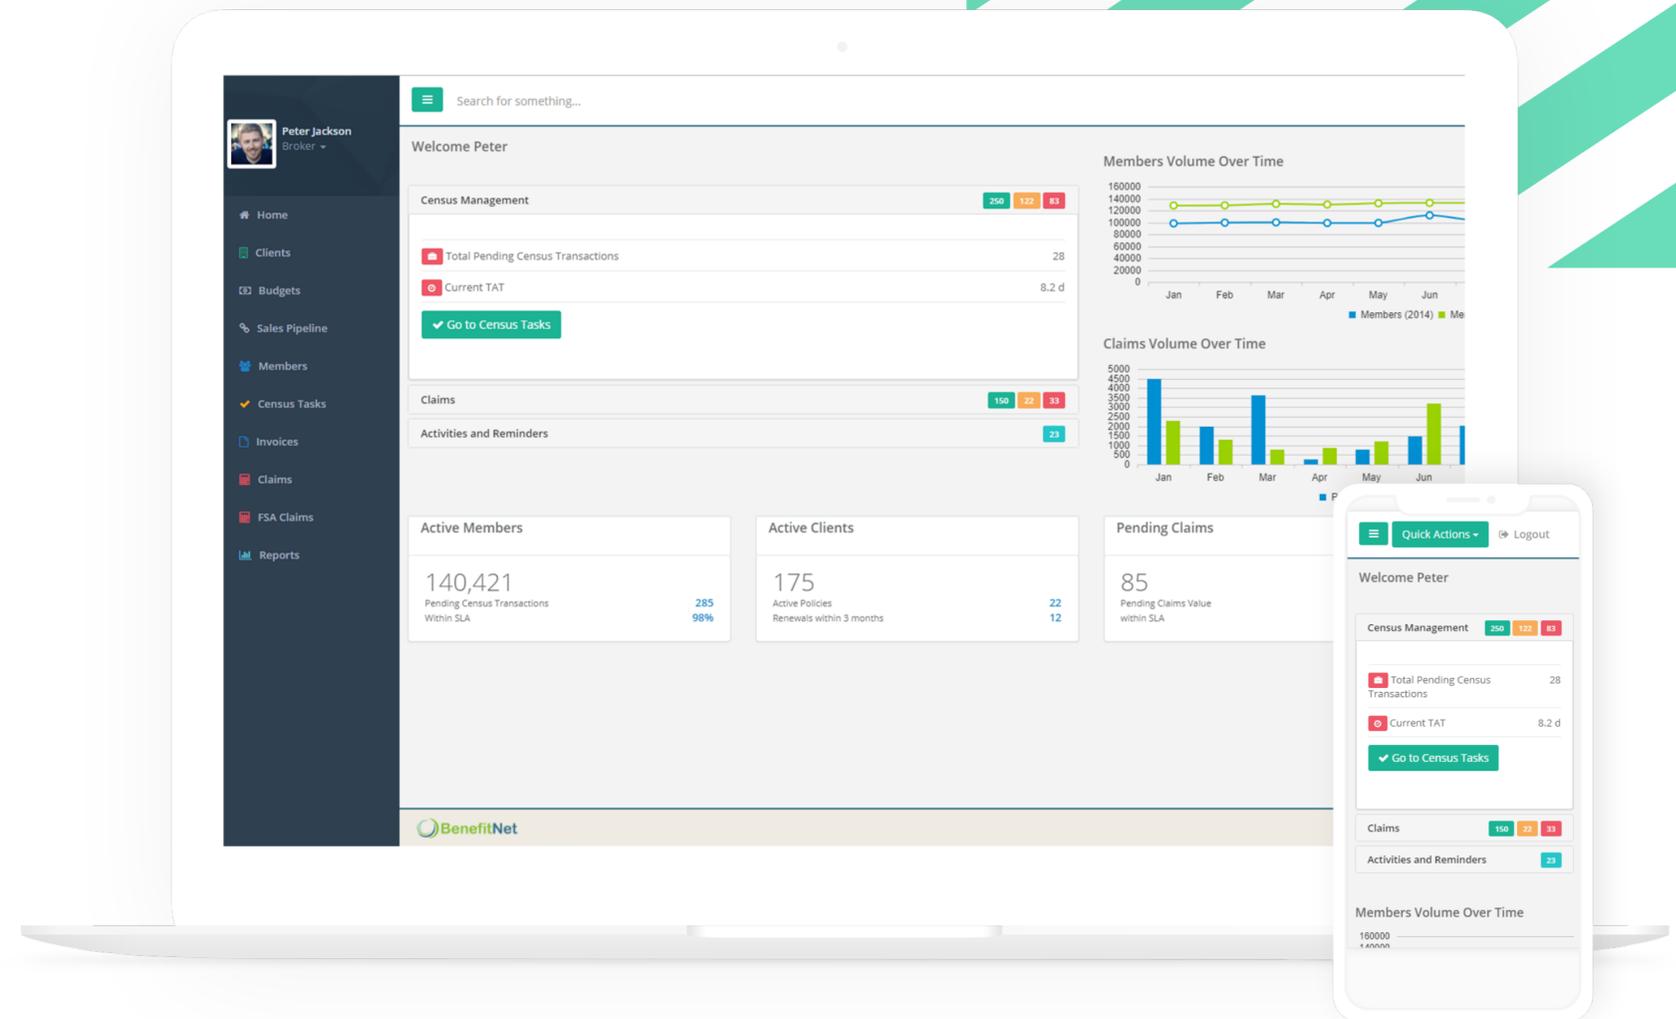

CHALLENGE:

It's too expensive to contact insurance companies directly. So, our customers decided to create a unique platform that connects insurance brokers and their clients to meet the needs for reasonable insurance costs. They decided to develop a Benefitnet project to meet the needs for connecting insurers, brokers, and employees in one place.

SOLUTION:

A unique product that helps insurers, brokers, and employers administer their employees' benefits. It effectively automates and optimizes the complicated workflows related to census management, claims management, invoicing and premiums, analytics as well as streamlines the complex relationship between clients, brokers, and insurance providers.

FEATURES

Modern web-based platform.

This solution is built using the latest technologies and is accessible on any standard browser or mobile device.

Multiple policy types.

BenefitNet allows administration of multiple risk categories for each client such as medical, life, and disability including flexible benefits schemes.

Effective collaboration.

The system allows members, insurers, and brokers to proactively communicate which leads to improved satisfaction level.

Global access.

BenefitNet can be rolled out for the clients or the organization across multiple countries, multiple currencies, or multiple languages.

Fast system integration.

BenefitNet is capable of interfacing with other systems including client's HR applications or insurer core systems.

Perfect processes automation.

This product automates key business processes for insurance companies and brokers.

- Git, Git extensions

Testing

- Unit testing (MSTest)
- Selenium (Black Box)

PM and RE

- Jira
- Team Foundation Server Online
- MS Project

Tools

- NewRelic,
- SendGrid,
- FreshDesk

TEAM COMPOSITION

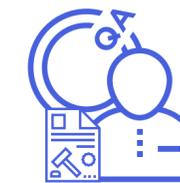

1 Team Lead

5 .NET Developers

2 JavaScript developers

5 QA

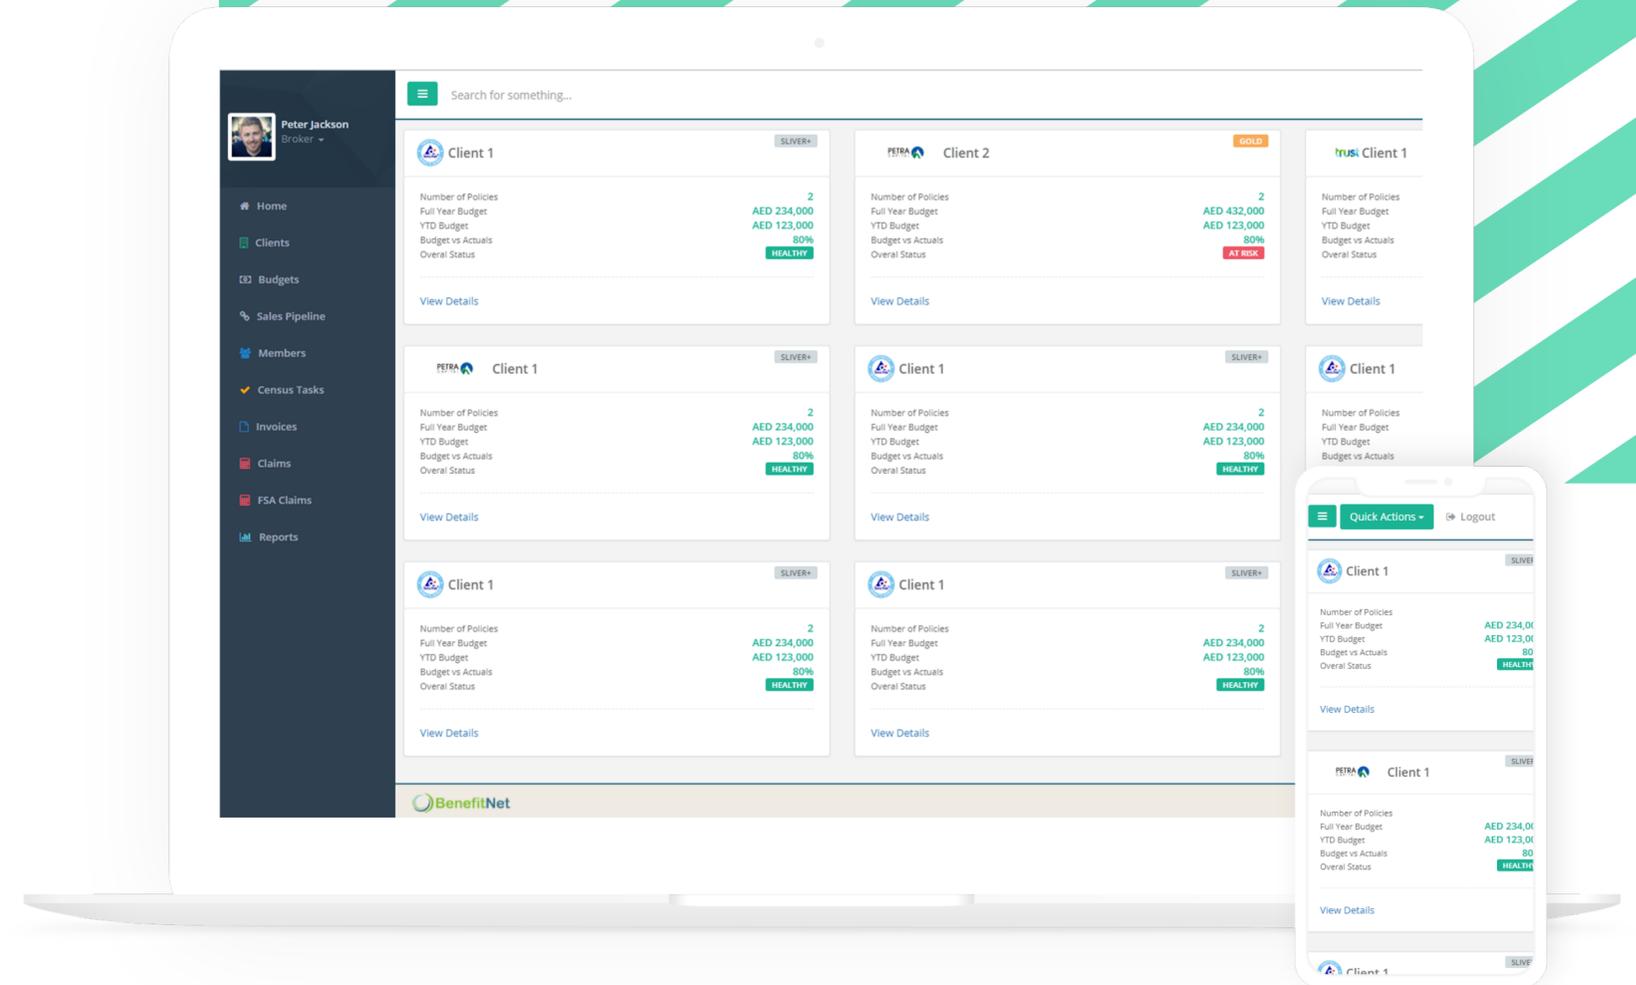

RESULTS

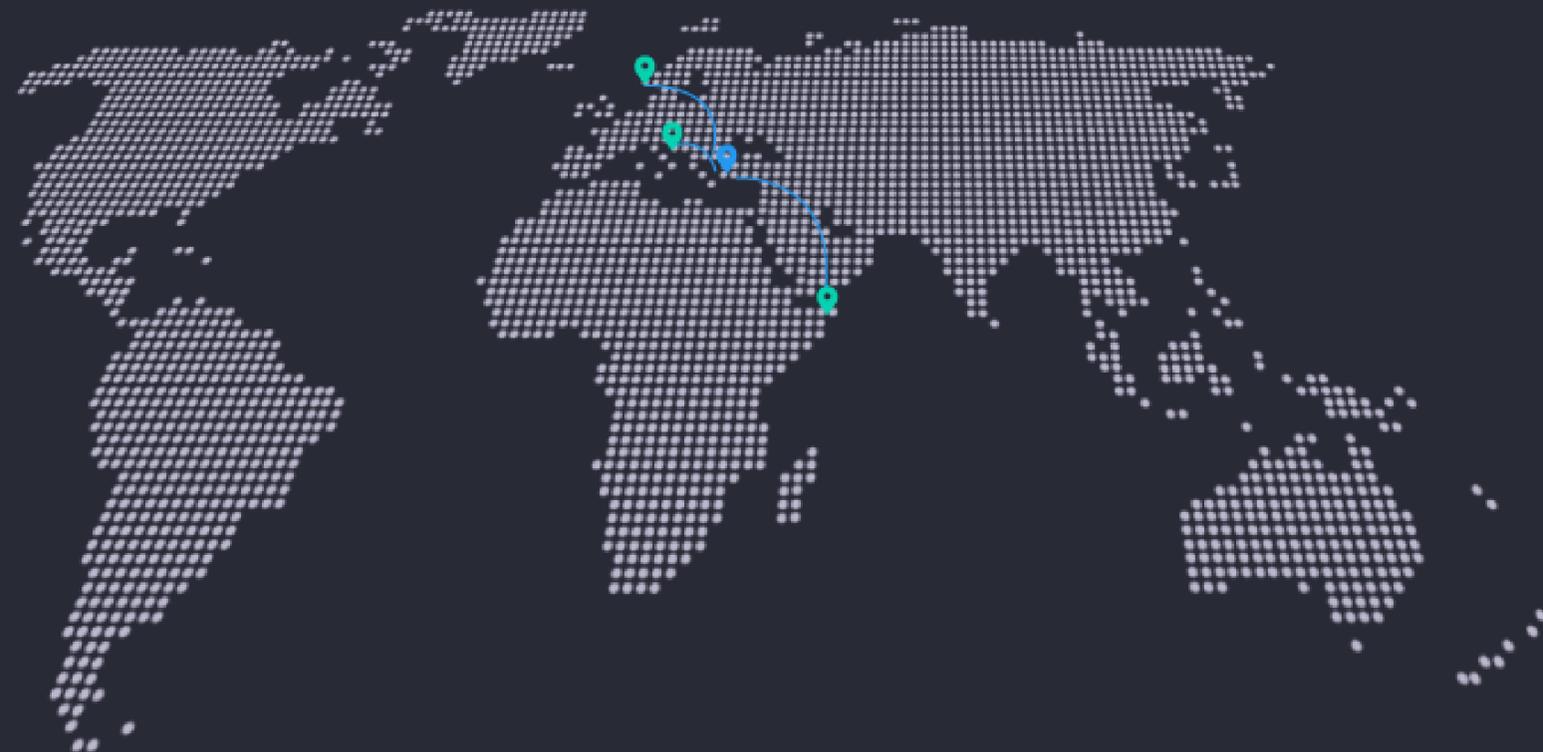

We developed a powerful tool both for insurers and employees to manage insurances and benefits in one centralized place. The system is simple and user-friendly so that every user is able to leverage it without special instructions. Every department of a company can easily manage their workflow. For example, HR specialists can easily track employees' annual and sick leave through the system. The platform is fully customizable according to your business needs and requirements. The product is available in China, UAE, Bahrain, etc.

LESSONS LEARNT

We have got a great experience in developing a project from scratch for the insurance industry. Our team worked hard on meeting the objectives of the project and the initial requirements of the customer. Thanks to our agile project management, we managed to quickly respond to the customer's change requests as well. The project was built on time and within the budget.
